- 4 x Warm White Strip Lights
- 2 x 5cm Connecting Cables
- 1 x 15cm Connecting Cable
- 1 x 30cm Connecting Cable
- 1 x Remote Control and the Switch Board
- 1 x USB Power Cable

Extra LEGO pieces

Note:

Place wires on the surface or under the LEGO building blocks.

The wire can be placed between the building blocks or under the block, but they should be placed between the studs correctly.

Insert the connectors to the ports.

Be careful when you are operating, there's only one correct way to insert, make sure the expansion board is upward, find the soldered "=" sign on the left of the port. When you are inserting, the side which the wires can be seen should be faced to the "=" sign and if you feel hard to insert, please stop, and don't force it, for that may result in bent pins inside the port or overheating of the expansion board.

At this point, use the tweezers to straighten the bent pins.

When installing dot lights, make sure they are correctly placed (Yellow LED package is exposed). You can put them either on the top of the studs or between studs.

Connecting cable connectors to Strip Lights

Take extra care when inserting connectors to ports on the Strip Lights. Connectors can be inserted only one way. With the Strip Light facing up, ensure the side of the connector with the wires exposed is facing down. If a plug won't fit easily into a port connector, don't force it. Doing so will damage the plug and the connector.

Finally, please pay attention to the positive and negative terminals of the battery when installing the battery case.

OK, Let's Begin!

Instructions for installing this kit

Start from installing lights for the Avengers Base

Turn to the inside of the building

Take a warm white strip light, a white 1x6 plate, stick the strip to the back of the plate

Take another 2 strip lights, 2 white 1x6 plates, stick the strip lights to the plates

separately

Take a 30cm connecting cable, connect it to one port on a strip light

Connect the strip light to the ceiling of the second floor

Lift the right plate on the roof to help us to place the cable underneath in between studs, reconnect the plate.

Lift the baseplate at the second floor to allow the cable thread down to the lower floor

Take another strip light, connect the cable thread down from the strip light at the second floor to it

Take a 5cm connecting cable, connect it to the other port on this strip light

Connect the strip light to the ceiling of the first floor, pull the 5cm cable rightward

Slightly lift the roof of the first floor to help the 5cm connecting cable tread through the gap and to the corridor at the right

Remove the following 2 trans 2x2 round plates

Take a warm white strip light, a 5cm connecting cable, Connect the 5cm connecting cable to one port on the strip light, connect the 5cm connecting cable from the corridor to the other port

Stick the strip light to the following position

Slightly lift the following wall to allow the 5cm connecting cable thread through

Connect the last strip light to the 5cm connecting cable

Take a 15cm connecting cable, connect it to the left port on the strip light.

Stick the strip light to the roof as per below

Take the switch board and the remote control

Connect the USB power cable to the input port on the board, connect the cable from the strip light to the output

Turn the power on to verify the current

Turn the building to the gate, remove the signal tower

Disassemble it as per below

Take a flashing white 15cm dot light

With lighting part facing down, connect the light to the hole at the center of the disc.
Note: do not thread it through.

Reconnect the gray plate, secure the light in place

Take a red bar, a gray round piece with a hole

Replace the original gray bar with the red one

reassemble the signal tower

Thread the connector of the light through the following gap before reconnecting the signal tower

Turn the power on to see if the light is working OK

Take a flashing white 30cm dot light, 2 black round plates with hole

Thread the connector of the light through the hole, pull till the light is facing up, connect the other round plate over

Remove the caution light from the right side of the gate, connect it to the round plate

Reconnect the caution light, slightly lift the building to allow the cable thread through the baseplate, pull it out from the left

Take a flashing white 15cm dot light, 2 black round plates with hole. Repeat the steps above to install the other caution light

Slightly lift the piece at the back of the signal tower, thread the cable of the light through the gap to the back

Take a gray 1x2 base plate, secure the cable of the light to the following place

Connect the cables of the lights to the output ports on the switch board, secure the board in place with adhesive squares

Pull the receiver out

You can adjust the lights by press the buttons on the remote control

This completes installation of this LED Lighting Kit. ENJOY!
