

CITY DOWNTOWN FIRE BRIGADE #60216 Lighting Kit

Package contents:

- 1 x 15cm Warm White Light
- 1 x 30cm Warm White Light
- 2 x 15cm Warm White Dot Lights
- 5 x 15cm White Dot Lights
- 2 x Warm White Strip Lights
- 2 x 15cm Connecting Cables
- 1 x 6-port Expansion Boards
- 1 x 8-port Expansion Boards
- 1 x AA Battery Pack
- 1 x Round Coin Cell Battery Pack
- Extra LEGO pieces、Adhesive Squares

Note:

Place wires on the surface or under the LEGO building blocks.

The wire can be place between the building blocks or under the block, but they should be placed between the studs correctly.

Insert the connectors to the ports.

Be careful when you are operating, there's only one correct way to insert, make sure the expansion board is upward, find the soldered "=" sign on the left of the port. When you are inserting, the side which the wires can be seen should be faced to the "=" sign and if you feel hard to insert, please stop, and don't force it, for that may result in bent pins inside the port or overheating of the expansion board.

At this point, use the tweezers to straighten the bent pins.

When installing dot lights, make sure they are correctly placed (Yellow LED package is exposed). You can put them either on the top of the studs or between studs.

Connecting cable connectors to Strip Lights

Take extra care when inserting connectors to ports on the Strip Lights. Connectors can be inserted only one way. With the Strip Light facing up, ensure the side of the connector with the wires exposed is facing down. If a plug won't fit easily into a port connector, don't force it. Doing so will damage the plug and the connector.

Finally, please pay attention to the positive and negative terminals of the battery when installing the battery case.

OK, Let's Begin!

Instructions for installing this kit

Start from installing lights for the firetruck. Remove the trans slope plate and the gray piece with yellow and black strips from the head of the truck.

Take 2 warm white 15cm dot lights.

Install one light as per below, secure the light at the head of the truck by connecting the slope plate over

Reconnect the pieces we removed before.

Repeat the previous steps to install the headlight at the other side

Take the Round Coin Cell Battery Pack, a 6-port expansion board, assemble them as per below, stick adhesive squares at both sides of the expansion board.

Turn the power on to verify the lights!

Turn to the back of the truck and start to install the taillights. Remove the following 2 pieces

Take 2 white 15cm dot lights

Repeat the steps above to install the taillights

Also turn the power on to test if the lights are working OK!

Turn the car over to allow us to hide the cable and battery pack underneath. Disconnect the cables of the lights from the expansion board.

Remove the 2x2 plate and the 4x6 plate from the bottom of the car

Group the cables of the headlights together, pull them toward the back of the car, connect them and the taillights to the 6-port expansion board. Tuck excess cables around the expansion board.

Stick adhesive squares to the battery pack as per below, secure the battery pack to the bottom of the truck

Connect the cable of the battery pack to the 6-port expansion board, tuck excess cable around the expansion board

This completes installation of lights for the firetruck. ENJOY!

Continue to install lights for the building.
Remove the following pieces from the roof

Remove the following 2 trans yellow pieces

Remove the following red piece and the gray plate

Make a warm white 15cm light

With lighting part facing up, secure the light to the following place, reconnect the gray plate, pull the cable out from the gap between the gray plate and the red plate
