

HARRY POTTER HOGWARTS WHOMPING WILLOW # 75953 Lighting Kit

Package contents:

- 6 x 15cm White Dot Light
- 4 x 15cm Warm White Dot Light
- 4 x 15cm Warm White Light
- 3 x 15cm Connecting Cables
- 1 x Warm White Strip Light
- 3 x 6-port Expansion Boards
- 1 x Round Coin Cell Battery Pack
- 1 x USB Power Cable
- Extra LEGO pieces

Note:

Place wires on the surface or under the LEGO building blocks.

The wire can be placed between the building blocks or under the block, but they should be placed between the studs correctly.

Insert the connectors to the ports.

Be careful when you are operating, there's only one correct way to insert, make sure the expansion board is upward, find the soldered "=" sign on the left of the port. When you are inserting, the side which the wires can be seen should be faced to the "=" sign and if you feel hard to insert, please stop, and don't force it, for that may result in bent pins inside the port or overheating of the expansion board.

At this point, use the tweezers to straighten the bent pins.

When installing dot lights, make sure they are correctly placed (Yellow LED package is exposed). You can put them either on the top of the studs or between studs.

Connecting cable connectors to Strip Lights

Take extra care when inserting connectors to ports on the Strip Lights. Connectors can be inserted only one way. With the Strip Light facing up, ensure the side of the connector with the wires exposed is facing down. If a plug won't fit easily into a port connector, don't force it. Doing so will damage the plug and the connector.

Finally, please pay attention to the positive and negative terminals of the battery when installing the battery case.

OK, Let's Begin!

Instructions for installing this kit

Let's start from installing the lights for the car

Take 2 white 15cm dot lights

Remove the headlight and the following pieces from the left side of the car

Thread the connector through the hole on the brick, pull the cable till the lighting part is facing up, reconnect the round plate to secure the light

Reconnect the headlight

Lift the front window to allow the cable thread through the gap, pull the cable out from the inside of the driver's room

Reconnect the pieces we removed before

Turn the car to the other side. Repeat the previous steps to install the headlights at the right side

Take the Round Coin Cell Battery Pack, connect the cables to it to test if the lights are working OK

Take 4 white 15cm dot lights, turn the car to its back, we'll install the taillights

Remove the following taillight and the pieces

Take a dot light, with lighting part facing up, secure it by connecting the round plate over

Similarly, continue to install the second dot light

Reconnect the taillights, place the cables of the lights underneath in between studs, then, pull the lights to the inside of the driver's room

Connect the cables to the Round Coin Cell Battery Pack to verify the current

Repeat the steps above to install the taillights at the other side

Remove the roof, connect the cables inside the driver's room to the Round Coin Cell Battery Pack, tuck excess cables around the battery pack. With switch facing up, place the battery pack inside the driver's room

Reconnect the roof, turn the power on to test the current

Let's move onto installing lights for the building, start from the left side of the building, remove the following 2 lights from the wall

Take 2 warm white 15cm dot lights

Disassemble the lights as per below, take a dot light, thread its light through the trans yellow piece, reconnect the black round plate

Bend the light before reconnecting the black round plate. Note: do not pull the cable too tight

Install the other light as we did before

Remove the bricks which are connected to the lights from the wall, connect the lights to them

Thread the cable of the light through the gap, pull it from inside of the building

Similarly, reconnect the other light

Take a 15cm warm white light, a 2x2 round plate

With lighting part facing down, secure the light underneath the roof with the round plate

Take a 6-port expansion board, stick tapes at both sides, connect a 15cm connecting cable to it

Connect all cables of the lights to the expansion board, tuck excess cables around the board. Stick the board on the wall

Disconnect the following round plate to secure the hanging cables

Thread the 15cm connecting cable from the expansion board through the gap on the wall

Turn the power on and enjoy the light

Thread the 15cm connecting cable through the gap on the near building

Take a warm white strip light, a 15cm connecting cable, a 1x6 plate. Stick the strip light to the back of the plate, connect the 15cm connecting cable to its port

Connect the other port to the 15cm connecting cable we threaded through the wall before

Place the excess cable in between studs of the plate, connect the strip light to the roof

Remove the following pieces from the tower

Thread the 15cm connecting cable from the strip light through the gray technic piece before reconnecting the technic piece

Place the connecting cable in between studs, pull it out from the right side, reconnect the tower

Remove the second floor of the tower

Take a 15cm warm white light, a 2x2 round plate. Install the light to the roof as we did before

Remove the following plates

Connect the plate underneath the second floor of the tower. Thread the connector of the light through the following gap to the first floor inside the building. Reconnect the second floor of the tower

Disconnect the right building. Put the left building down

Take a warm white 15cm light, a 2x2 round plate. Repeat the previous steps to install the light to the top of the tower

Now, we' ll install the last part. Take 2 warm white 15cm dot lights, a warm white 15cm light, a 2x2 round plate. Repeat the steps above to install the lights

Take a 6-port expansion board, stick taps to both sides, connect a 15cm connecting cable to it

Connect all cables of the lights we just installed to the expansion board, tuck excess cable to it. Secure the expansion board n the wall by using the adhesive tapes

Thread the 15cm connecting cable though the following gap, pull it toward the building at the left side

Remove the following pieces from the building at the left, thread the cable through the gray technic piece, pull it to the first floor inside the left building

Lift the yellow brick to place the cable in between studs, reconnect the brick

Take a 6-port expansion board, a USB power cable. Stick adhesive tapes to the expansion board

Connect the cable from the first floor to the 6-port expansion board, tuck excess cable around the expansion board. Connect the USB cable to it, stick the expansion board on the wall

This completes installation of this LED Lighting Kit. ENJOY!
